PT Monocional anti-idiotype antibody 11D10 - elicits immune response pragainst human milk fat globule disease associated tumours, especially breast cancer PS Example 2; Fig 26C; 130pp; English.

CI This polypeptide sequence comprises a consensus sequence of murine C light chain variable regions (VL) selected on the basis of identity C light chain variable regions (VL) selected on the basis of identity C light chain variable regions (VL) selected on the basis of identity C light chain variable regions (VL) selected on the basis of identity C light chain the variable regions (VL) selected on the basis of identity C light variable regions (W27129) was also produced. Illing has at C search. A VH consensus (W27122) was also produced. Illing has at C least 18 departures from the consensus sequences (7 in the light C chain and I in the heavy chain). 8 Occur within CDRs and 10 cutside CDRs. Illing polypeptides and polynucleotides can be used in vaccines and pharmaceutical compositions for the treatment CC outside CDRs and pharmaceutical compositions for the treatment CC of human milk fat globule-associated diseases such as breast
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Ş

                                                                                                            chain was also amplified from an existing construct, PSWI-VHDI.3 (Ward et al, 1989). The two fragments were assembled via a linker vector for expression on the surface of fd bacteriophage. In this way, the VL domain was replaced by a library of VL domains to allow clones were isolated which bound to TEL (the parent antibody Dl.3 two of these clones, WFI to HEL). The sequences of the light chains of respectively. The Dl.3 light chain is given in R21310 and R21311 see also R21260-307, 309-312, R22450, R22565, R22567-81.
                                                                                                                                                                                                                                                                                                                                                                                                                          Producing members of specific binding pairs - by expression in recombinant host cells with a secreting replicable genetic display package.

Example 46; Fig 52; 109pp; English.

The sequence is the light chain of clone MIF encoding an scFv fragment specific for both hen and turkey egg lysozyme (HEL and TEL). The DNA encoding the chain was amplified from a CDNA library prepd. from the spleen of an unimmunised mouse. The corresponding heavy
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          McCafferty J,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           central nervous system spongiform encephalopathies in humans and animals. The scrapie isoform of the prion protein (Pr-Sc) is necessary for both the transmission and pathogenesis of the transmission end pathogenesis of the transmission end pathogenesis of the transmission and pathogenesis of the transmission and humans. The antibodies can be used in a method of the invention for detecting human Pr-Sc in a source. The antibodies specifically bind to prion proteins associated with disease and do not bind to denatured prp proteins not associated with disease. They can bind to prion proteins of a specific species of mammals. They can also have the ability to neutralise infectious prions. The antibodies can be used for screening for the presence of prions in products such as pharmaceuticals, food or cosmetics. They can also be used for prion neutralisation to purify products, for extraction of prion proteins or for therapy, for diseases such as bowine spongiform encephalopathy, creuzifeldt Jakob Disease, fatal familial insomnia or
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 (REGC ) UNIV CALIFORNIA.

Burton DR, Prusiner SB, Williamson RA;

WPI; 97-202357/18.

New antibodies to the scraple isoform of prion protein - used for detection of infectious prion proteins or for treating disease such as BSE, CJD or scraple Example 9; Fig 6; 99pp; English.

W18266-W18285 represent portions of the antibodies of the invention. The antibodies of the invention are able to bind the scraple isoform of prion protein PrP-Sc in situ. Prions are infectious pathogens that cause
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               PrP 37 light chain variable region.

Compsis. Config. antigen-targetting antibody fragment construct comprising dimer of single-chain Fv fragments
Example 1; Columns 33-36; 30pp; English.
Variable heavy (VH) and variable light (VL) genes were cloned a 520C9 hybridoma cDNA library, using probes directed toward the antibody constant and joining regions. A two single chain Fv (a gene was constructed by connecting the VH and VL genes with a Ser rich polypeptide linker. The resulting 520C9 two sFv gene, which encodes the present sequence, was inserted into an expresent
                                                                                                                                                                                                                                                                                             29-OCT 1996 (first entry)
29-OCT 1996 (first entry)
520C9 anti-c-erbb-2 two single chain Fv construct.
520C9; anti-c-erbb-2 monoclonal antibody; single chain Fv; sFv; construct; polypeptide linker; C-terminal amino acid sequence; in vivo imaging; drug targetting experiment; homodimer; increased; binding avidity; tissue retention time.
                                                                                                                                (CHIR ) CHIRON CORP.

The pref. vector or plasmid of the invention has a double-stranded DNA seq. coding for a variable region of a light or heavy chain of IgG, or for a variable region of a light or heavy chain of an immunoglobulin specific for an enzyme or surface protein. The sequence esp. codes for a variable region of a light chain having 115 AAs or for a variable region of a heavy chain having the D region of the heavy chain.

SC Claim 4; pages 60-61; 87pp; English.

C crebb-2 refers to a protein antigen expressed on the surface of tumour cells. Such as breast and ovarian tumour cells, which is an C approx. 200,000 mol. wt. acidic glycoprotein having an isolelectric pt. of about 5.3 (see 046083, R39569). A single chain FV (SFV)

C aper fusion including VH- and VL- encoding genes connected by a peptide encoding linker. Such linker sequences are set forth in linker sequences in R39572. Using 046084 for the 520C9 monoclonal antibody a single chain polypeptide can be produced having a binding affinity for a c-erbb-2 related antigen. 'X' in R39569 crefers to the location of a stop codon in 046084.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ş

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          07-FEB-1994 (first entry)
Sequence of 520C9 sFv protein.
Single chain Fv polypeptide; VH-VL heterodimer; immunoglobulin; biosynthetic single polypeptide chain binding site; ss.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  N-PSDB; Q46084
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          vector, transformed into E. coli, and protein expression induced by the addn. of IPTG to the culture medium.

A compsn. comprising a carrier and the 2 sFv protein prod. can be used for in vivo inaging, and drug targetting experiments. The 2 sFv protein prod. is a homodimer, in which both fragments target the same antigen, therefore giving greater binding avidity and longer tissue retention times, compared to individual sFv protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       R39569 standard;

PT Method of resurfacing of rodent antibodies to produce humanised PT antibody forms - for producing non-human antibodies with improved PT antibody forms - for producing non-human antibodies with improved PT therapeutic efficiency by presenting human surface on V-region CC Example 1; Fig 3A; 230pp; English.

CC The present sequence is that of the light chain variable (LC VR) region CC antibody glb2. This sequence was aligned with 11 other known CC acid residues was determined. This information can be used in a method to CC determine how to modify a rodent antibody or fragment by resurfacing in CC alignment) at positions 1, 3, 5, 9, 15, 18, 46, 47, 51, 63, 66, 73, 86, CC combinations of surface residues in the marine sequences were found in CC the human sequences and vice versa. The DNA was used in the prepn. of catalytic antibody (CA) producing bacteriophage. The CAs can be used to activate/deactivate a biological function in an animal by enhancing the rate of cleavage, or formation of a specific bond within a mol. in vivo. Sequence 90 AA;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 CC BALB/C mouse that had received multiple injections of mercuric lons CC reacted with glutathione to produce a mercuric ion coordinate covalent compound which was covalently bound to keyhole limpet CC covalent compound which was covalently bound to keyhole limpet CC shemocyanin (KLH). Eight hybridomas (1F10, 4A10, 1C11, 5G4, 23F8, 2D5, 2B6 and 3E8) were producing MAbs that were strongly positive against glutatione-mercuric ions but negative against glutathione CC without mercuric ions. RNA was isolated from hybridoma cells with guandidne isothiocyanate. First strand CDNA synthesis was catalysed by Mulv reverse transcriptase. The primers used for cDNA synthesis cc were complementary to the 5' end of the CH1 domain of the heavy CC thain expressed by the hybridoma of interest, or to the 5' and of the C kappa domain. Some of the primers used for cDNA synthesis are shown in 097511-097518. The primer used for cDNA synthesis of the C convenient of a particular antibody polypeptide was also used for CDNA synthesis of the CR amplification of that variable region, in conjunction with CC an appropriate V-region primer. In addition, the VH primer 097518 CC was used to amplify the mAb 2D5 and 5B6 heavy chains. The sequences CC of the PCR amplified nucleotides were determined. These are given cc in 097489-09751 and the descriptions of the SEQ ID nos given on pp 44-45 and in the claims are different from the descriptions in the sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Query Match

New polypeptide(s) which bind heavy metals, esp. mercury - deriver monoclonal antibodies, used for detecting, removing, adding or neutralising heavy metals
Claim 23; Page 70; 106pp; English.

Hybridoma antibodies have been produced with the spleen cells of BALB/c mouse that had received multiple injections of mercuric ion reacted with glutathione to produce a mercuric ion coordinate covalent compound which was covalently bound to keyhole limpet hemocyanin (KiH). Eight hybridomas (1F10, 4A10, 1C11, 5G4, 23F8, 15B6 and 3E8) were producing MAbs that were strongly positive against glutatione-mercuric ions but negative against glutathione without mercuric ions. RNA was isolated from hybridoma cells with

Hybridoma antibodies have been produced with the spleen cells of covalent compound which was covalently bound to keyhole limpet the memoryanin (KLH). Eight hybridomas (IFIO, 4AIO, ICII, 504, 31F8, 2D5, CC against galtatione-mercuric ions but negative against glutatione-mercuric ions but negative against glutatione-mercuric ions but negative against glutatione-mercuric ions but negative against glutatione (CC without mercuric ions. RNA was isolated from hybridoma cells with CC guanidine isothlocyanate. First strand cDNA synthesis was catalysed CC were complementary to the 5' end of the CHI domain of the heavy CC that C kappa domain. Some of the primers used for cDNA synthesis are CC shown in 097511-097518. The primer used for cDNA synthesis are CC wariable region of a particular antibody polypeptide was also used CC variable region of a particular antibody polypeptide was also used CC was used to amplify the mAb 2D5 and 58 heavy chains. The sequences CC m 197498-097510 and the deduçed AA sequences in R79241-R79250 c and in the claims are different from the descriptions in the CC and in the claims are different from the descriptions in the CC and in the claims are different from the descriptions in the CC cand in the claims are different from the descriptions in the CC cand in the claims are different from the descriptions in the CC cand in the claims are different from the descriptions in the CC cand in the claims are different from the descriptions in the conditions of the conditions in the claims are different from the descriptions in the claims are different from the

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           В
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         guanidine isothiocyanate. First strand-cDNA synthesis was catalysed by Mulv reverse transcriptase. The primers used for cDNA synthesis were complementary to the 5' end of the CHI domain of the heavy chain expressed by the hybridoma of interest, or to the 5' and of the C kappa domain. Some of the primers used for cDNA synthesis are convening to the convening the primer used for cDNA synthesis are convening to the particular antibody polypeptide was also used to amplification of that variable region, in conjunction with can appropriate V-region primer. In addition, the VH primer 097518 convening to the mab 2D5 and 5B6 heavy chains. The sequences of the PCR amplified nucleotides were determined. These are given convening to the co
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Query Match

                                                                                                                                                                                                                                                                                                Synthetic.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           cells (APC), genetically modified to contain at least one antigen presenting exclusively at one or more presented to contain at least one antigen cells (APC), genetically modified to contain at least one antigen exclusively at one or more preselected sites. The conjugate is capable of delivering the antigen to APC and eliciting an immune response to the antigen. The new conjugates are useful as vaccines and are able in a specific example, a conjugate was constructed using the murine anti-human class II monoclonal antibody secreted by hybridoma at andemly linked T and B cell epitope derived from HIV MN strain. The present sequence represents the light chain variable region antigen CLTB36 was used in the preparation of a conjugate with
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   immuno:diagnosis

PT recombinant host cells with a secreting replicable genetic display package.
PS Example 21; Fig 24; 209pp; English.
PT recombinant host cells with a secreting replicable genetic from a single chain FV library from an immunised mouse. The librar Trom marks from mice immunised with phox coupled to chicked serum captured from a single chain FV library from an immunised with gene LI. The result-cing library of clones were sequenced revealing eight different VH genes (A-H) (see C23447-84) and ligated into fdCAPZ (see C23445) for exclones were sequenced revealing eight different VH genes (A-H) (see C1264-71) in a variety of pairings with the seven different Vk c genes (a-g). Of the twenty three clones sequenced three were of clones were NF-d combinations. The Kd of VH-By/K-d for phox-GABA was 10 mk. Only two other combinations (of eleven tested) were combinations of eleven tested) were combinations (of eleven tested) were combined were combined with antigen, probable combined with antigen, probable combined with antigen, probable combined were combined with antigen, probable combined with antigen, pr

Statistics: Mean 28.231; Variance 51.804; scale 0.545

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

In some cases, such as IgA and IgM, the subunits associate into larger oligomers.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         19/1

CC polypeptide of the invention The polypeptides are capable of forming CC antigen binding structures with specificity for Rhesus D antigens which CC include Rhesus D-specific CDR 1, CDR 2, and CDR 3 regions of pairs of CC variable heavy (VH) and variable light (VL) chain sequences. The CC variable heavy (VH) and variable light (VL) chain sequences. The CC include Rhesus D antigens which would benefit from anti-Rhesus D immunoglobulin, CC e.g. idiopathic thrombocytopenic purpura. They can also be used for the CC protection of Rhesus negative women before or immediately after the birth of a Rhesus positive child to prevent haemolytic disease of the newborn immunoglobulin can be used after mistransfusions of Rhesus positive blood to Rhesus negative recipients in order to prevent sensitisation to the Rhesus D antigen. The products can also be used as diagnostic reagents.

FRESULT ACCORDED TO THE STATE OF THE STATE O
New Rhesus D antigen binding poly:peptide(s) - used to neutralise PT New Rhesus D antigen in therapy, e.g. for treating idiopathic thrombocytopenic purpura
PS Claim 1; Fig 15B; 68pp; English.
CC This sequence is the antibody LDL/2-6-3-VL chain sequence, which is a CC polypeptide of the invention. The polypeptides are capable of forming CC antigen binding structures with specificity for Rhesus D antigens which CC include Rhesus D-specific CDR 1, CDR 2, and CDR 3 regions of pairs of CC variable heavy (VH) and variable light (VL) chain sequences. The CC antibodies are active against the Rhesus D antigen. They can be used for treating disorders which would benefit from anti-Rhesus D immunoglobulin, CC e.g. idiopathic thrombocytopenic purpura. They can also be used for the protection of Rhesus negative women before or immediately after the birth CC (HDN) in subsequent pregnancies. In addition, anti-Rhesus D in subsequent pregnancies. In addition, anti-Rhesus D continuoglobulin can be used after mistransfusions of Rhesus positive blood CC Rhesus D antigen: The products can also be used as diagnostic reagents.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Š
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                PS Claim 1; Fig 14B; 68pp; English.

CC This sequence is the antibody LD1-6-17-VL chain sequence, which is a CC polypeptide of the invention. The polypeptides are capable of forming CC antigen binding structures with specificity for Rhesus D antigens which include Rhesus D-specific CDR 1, CDR 2, and CDR 3 regions of pairs of CC variable heavy (VH) and variable light (VL) chain sequences. The CC antibodies are active against the Rhesus D antigen. They can be used for treating disorders which would benefit from anti-Rhesus D immunoglobulin, CC e.g. idiopathic thrombocytopenic purpura. They can also be used for the protection of Rhesus negative women before or immediately after the birth CC of a Rhesus positive child to prevent haemolytic disease of the newborn CC (HDN) in subsequent pregnancies. In addition, anti-Rhesus D immunoglobulin can be used after mistransfusions of Rhesus positive blood to Rhesus D antigen. The products can also be used as diagnostic reagents.

CC Rhesus D antigen. The products can also be used as diagnostic reagents.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               %9999999999999999
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Matches

CC laim 1; Fig 4B; 68pp; English.

CC This sequence is the antibody LD1-110-VL chain sequence, which is a CC polypeptide of the invention. The polypeptides are capable of forming CC include Rhesus D-specific CDR 1, CDR 2, and CDR 3 regions of pairs of CC include Rhesus D-specific CDR 1, CDR 2, and CDR 3 regions of pairs of CC variable heavy (VH) and variable light (VL) chain sequences. The CC antibodies are active against the Rhesus D antigen. They can be used for CC treating disorders which would benefit from anti-Rhesus D immunoglobulin, CC e.g. idiopathic thrombocytopenic purpura. They can also be used for the CC protection of Rhesus negative women before or immediately after the birth CC of a Rhesus positive child to prevent haemolytic disease of the newborn CC (HDN) in subsequent pregnancies. In addition, anti-Rhesus D cC immunoglobulin can be used after mistransfusions of Rhesus positive blood CC Rhesus D antigen. The products can also be used as diagnostic reagents.

PT thrombocytopenic purpura

PS Claim 1; Fig 11B; 68pp; English.

CC This sequence is the antibody LD2-14-VL chain sequence, which is a CC polypeptide of the invention. The polypeptides are capable of forming CC antigen binding structures with specificity for Rhesus D antigens which include Rhesus D-specific CDR 1, CDR 2, and CDR 3 regions of pairs of CC variable heavy (VH) and variable light (VL) chain sequences. The CC antibodies are active against the Rhesus D antigens. They can be used for treating disorders which would benefit from anti-Rhesus D immunoglobulin, CC e.g. idiopathic thrombocytopenic purpura. They can also be used for the protection of Rhesus negative women before or immediately after the birth CC of a Rhesus positive child to prevent haemolytic disease of the newborn CC (HDN) in subsequent pregnancies. In addition, anti-Rhesus D content of the Rhesus D segative recipients in order to prevent sensitiation to the phesus D antigen. The products can also be used as diagnostic reagents.

The antibodies are active against the Rhesus D antigen. They can be used for treating disorders which would benefit from anti-Rhesus D immunoglobulin, e.g. idiopathic thrombocytopenic purpura. They can also be used for the protection of Rhesus negative women before or immediately after the birth of a Rhesus positive child to prevent haemolytic disease of the newborn (HDN) in subsequent pregnancies. In addition, anti-Rhesus D immunoglobulin can be used after mistransfusions of Rhesus positive blood to Rhesus negative recipients in order to prevent sensitisation to the Rhesus D antigen. The products can also be used as diagnostic reagents.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           New Rhesus D antigen binding poly:peptide(s) - Rhesus D antigen in therapy, e.g. for treating
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           WPĬ; 98-077173/07.

The polypeptides are capable of forming antigen binding structures with specificity for Rhesus D antigens which include Rhesus D-specific CDR 1, CDR 2, and CDR 3 regions of pairs of CC variable heavy (VH) and variable light (VL) chain sequences. The CC cantibodies are active against the Rhesus D antigen. They can be used for treating disorders which would benefit from anti-Rhesus D immunoglobulin, CC e.g. idiopathic thrombocytopenic purpura. They can also be used for the protection of Rhesus negative women before or immediately after the birth CC of a Rhesus positive child to prevent haemolytic disease of the newborn CC immunoglobulin can be used after mistransfusions of Rhesus positive blood to Rhesus negative recipients in order to prevent sensitisation to the CR Rhesus D antigen. The products can also be used as diagnostic reagents.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Best

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Matches
New Rhesus D antigen binding poly:peptide(s) - used to neutralise Rhesus D antigen in therapy, e.g. for treating idiopathic thrombocytopenic purpura Claim 1; Fig 2B; 6Bpp; English.

This sequence is the antibody LD1-52-VL chain sequence, which is a polypeptide of the invention. The polypeptides are capable of forming antigen binding structures with specificity for Rhesus D antigens which include Rhesus D-specific CDR 1, CDR 2, and CDR 3 regions of pairs of variable heavy (VH) and variable light (VL) chain sequences. The antibodies are active against the Rhesus D antigen. They can be used for treating disorders which would benefit from anti-Rhesus D immunoglobulin, e.g. idiopathic thrombocytopenic purpura. They can also be used for the protection of Rhesus negative women before or immediately after the birth
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Vogel
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Antibody LD1-52-VL chain sequence.

Antibody; variable heavy chain; VH chain; variable light chain; VL chain; Rhesus D antigen; anti-Rhesus D immunoglobulin; HDN; therapy; idiopathic thrombocytopenic purpura; haemolytic disease of the newborn.
                                                                                                                                                                                                                                                                                                                                                                                                                                                         WPI; 98-077173/07.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    PT Rhesus D antigen in therapy, e.g. for treating idiopathic purpura

Claim 1; Fig 8B; 68pp; English.

CC This sequence is the antibody LD2-5-VL chain sequence, which is a complete sequence is the antibody LD2-5-VL chain sequence, which is a complete sequence is the antibody LD2-5-VL chain sequence, which is a complete sequence is the invention. The polypeptides are capable of forming complete binding structures with specificity for Rhesus D antigens which can be used for the complete sequence of the invention of Rhesus D-specific CDR 1, CDR 2, and CDR 3 regions of pairs of complete complete sequences and complete sequences. The complete sequence of the sequences of the complete sequence of the complete sequence of the complete sequence of the complete sequence of the sequence of the complete sequence could be complete sequence of the newborn of a Rhesus positive child to prevent haemolytic disease of the newborn (HDN) in subsequent pregnancies. In addition, anti-Rhesus D introduction can be used after mistransfusions of Rhesus positive blood to Rhesus negative recipients in order to prevent sensitisation to the Rhesus D antigen. The products can also be used as diagnostic reagents. Sequence 106 AA;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Query Match 100.0%;

Antibody LD1-117-VL chain sequence.
Antibody; variable heavy chain; VL chain; variable light chain; VL chain; Rhesus D antigen; anti-Rhesus D immunoglobulin; HDN; therapy; idiopathic thrombocytopenic purpura; haemolytic disease of the newborn.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          of a Rhesus positive child to prevent haemolytic disease of the (HDN) in subsequent pregnancies. In addition, anti-Rhesus D immunoglobulin can be used after mistransfusions of Rhesus posit to Rhesus negative recipients in order to prevent sensitisation Rhesus D antigen. The products can also be used as diagnostic re
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          77 10

This sequence is the antibody LD1-117-VL chain sequence, which is a
polypeptide of the invention. The polypeptides are capable of forming
antigen binding structures with specificity for Rhesus D antigens which
cinclude Rhesus D-specific CDR 1, CDB 2, and CDR 3 regions of pairs of
cvariable heavy (VH) and variable light (VL) chain sequences. The
creating disorders which would benefit from anti-Rhesus D immunoglobulin,
c. e.g. idiopathic thrombocytopenic purpura. They can also be used for
the protection of Rhesus negative women before or immediately after the birth
of a Rhesus positive child to prevent haemolytic disease of the newborn
(HDN) in subsequent pregnancies. In addition, anti-Rhesus D solitive blood
to Rhesus negative recipients in order to prevent sensitisation to the
Rhesus D antigen. The products can also be used as diagnostic reagents.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Humanised alpha-4 integrin antibody 21.6 VL La.                                                                                                                                                                                                                                                                   asthma, atherosclerosis, AIDS, dementia, etc.

This polypeptide, designated La, comprises the light chain variable region (VI) of a humanised alpha-4 integrin antibody 21.6. It is composed of complementarity determining regions (CDRs) from the VI region (see W22409) of mouse alpha-4 integrin monoclonal antibody 21.6 and a modified human REI framework. It can be expressed in mammalian host cells following PCR amplification and mutagenesis of appropriate fragments of mouse and human DNA sequences. The humanised 21.6 VL and a humanised 21.6 VH (see W22413) can be used to produce a claimed humanised 21.6 vH (see W22413) can be used to produce a claimed humanised 21.6 treating asthma, atherosclerosis, AIDS, dementia, diabetes, inflammatory bowel disease, rheumatoid arthritis, transplant rejection, graft versus host disease, tumour metastasis, nephritis, atopic dermatitis, psoriasis, myocardial ischaemia, and acute leukocyte mediated lung injury. The antibody may also be used in the affinity purification of alpha-4 integrin for use as a vaccine or an immunogen. It is also useful for generating idiotypic antibodies. The humanised antibody has a half-life in the human circulation essentially equivalent to that to sequence 106 AA:
